

The **Held eVest** – a motorcycle airbag vest – which can be worn underneath any motorcycle textile jacket and selected leather suits.*

The **eVest** is completely independent due to the front zipper and can be worn under motorcycle clothing of any manufacturer.

With **eVest Clip-in** and the Clip-in loops, it can be integrated into any compatible Held Jacket and suit.

The In&box control module, installed in the back armour of the vest, is required for the vest to function.

- ▶ **electronic airbag activation, no connection to the motorcycle needed**
- ▶ **intelligent, constantly evolving In&motion algorithm**
- ▶ **very fast activation and inflation speed (0,06 sec), maximum protection level**
- ▶ **the system can be made operational again independently by the user after it has been activated**

The **In&box** is included with the **Held eVest** and can be used for 48 hours after initial setup. To enable the vest to function permanently, the **In&box** must be activated by membership with In&motion (www.inemotion.com). Option **BUYING** and option **LEASING** are available.

*Please note the fit recommendation from In&motion (www.inemotion.com)

**BE
HEROIC.**
